

## COLLATION SHRINK AND SLEEVE FILM

RPC bpi protec has extensive experience of producing shrink film. This product enables high speed packing methods to be utilised as a single or twin lane.

Shrink film is designed to protect your product through the supply chain, promoting and preserving it at the point of sale. Specialist inks can be used to prevent distortion of the design during the shrinking process.

### Typical Applications

- Beverage cans
- Beverage bottles
- Canned food
- Milk bottles

### Substrate materials

- Collation shrink
- Stretch sleeves
- Degradable

### Format options

- Single or multi-line format

- ✓ **HD Print** - Use of HD plates produces high quality print, whilst reducing then number of colours required.

- ✓ **Unique Numbering** - For that special promotion. Can be printed in view on the pack or hidden away from prying eyes.

- ✓ **Elastic Inks** - Specialised inks prevent 'cracking' of the design when shrunk at temperature around the product.

Multipack Solutions

## About us

RPC bpi protec specialises in flexible packaging and forms part of the RPC bpi group. The RPC bpi group is a leading supplier of high quality, value-added flexible solutions. With fully dedicated and market focused businesses, we design and engineer highly innovative and cost-effective solutions to preserve, promote and protect your valuable products.

Our expertise in design and engineering, combined with an in-depth knowledge of the needs of our clients and the markets they serve we are determined to surpass the existing boundaries of flexible solutions.

Our fully integrated recycling business is the largest in Europe, which shows our key focus is on sustainability and supporting the circular economy.
