

REEL FED LABELS

RPC bpi protec has extensive experience of producing RFL (Reel Fed Labels), employing our full range of 10 colour print and slitting capabilities.

These products are ideal for milk and beverage packaging. The specialist label material enables high speed packing methods to be utilised on the latest generation labelers. RFL film maximizes shelf impact, promoting your product at the point of sale.

Typical Applications

- Milk
- Water
- Soft Drinks
- Carbonated Drinks

Substrate Materials

- BOPP - White, Clear, Matt, Metallised
- typically range from 29mu to 38mu

Format Options

- Min 30mm wide
- Up to 10 colours

- ✓ **HD Print** - Use of HD plates produces high quality print, whilst reducing the number of colours required.

- ✓ **Specialist label material** - offers excellent tensile strength for faster application speeds and the elimination of web breaks during the manufacturing process.

- ✓ **Gauge maximization** - the strength of the film material also allows a thinner gauge film to be used for valuable weight reduction, delivering more labels per standard reel minimizing changeover times.
